AMPHORA

Am'phora n. (pl. -rae). Greek or Roman two handled vase ill. VASE).

Oxford Illustrated Dictionary

The need to store things of value has been with us almost since the beginning of time.

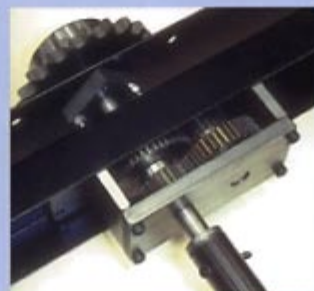

Items such as grain, wine, salt and even our own body parts have been kept in pots made from clay and stored in cool dark places of safety.

Today we still have the need to store things of value but our forebears had one advantage and that was - space.

We have made enormous progress in this very demanding problem and we are continuing to make improvements in a system that is fast becoming a world leader.

Ezitrac's low profile mobile base and plated tracks ensure the system can be installed in most offices. Safety locks are fitted as standard equipment and compensate for any unevenness in floors. Bases can be laid directly onto a variety of floor coverings, including carpet or vinyl, without prior levelling. All

bases are supplied with anti tilt mechanisms and a powerful 2:1 gear ratio makes the units particularly easy to use. The simplicity of Ezitrac's design allows ease of new installation, or relocation to other sites, without requiring specialist tools and provides the minimum of disruption

Ezitrac is an excellent mobile storage system that has been developed specifically for modern, design-aware offices. All units are finished in a durable, epoxy - polyester coating in a modern and attractive, range of colours. The low profile tracks are Hot Flame Spray Galvanised to BS 5493 providing an immensely hard and stable rolling surface.

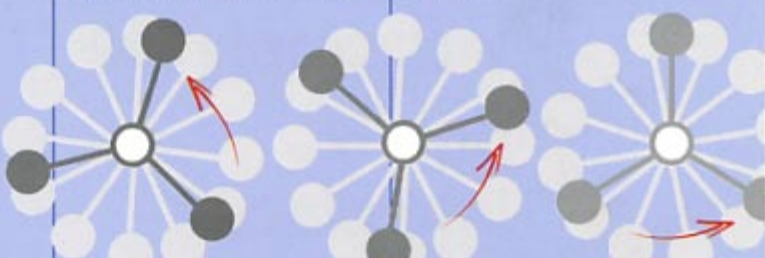

to the office. The Ezitrac mobile base meets stringent operating requirements owing to its durable steel construction. The unit is fully guaranteed for twelve months against defects in materials and workmanship. This includes installation, when fitted by one of our approved installers.

EXTRAS AVAILABLE
Behind upstand end panels.
Locking upstand for increased security of contents.
Three spoke or steering wheel option.
Warranty extension to 5 years.

SPECIFICATION
Tracks Rear guided friction driven system with all tracks Hot Flame Spray Galvanised as standard to BS 5493.
Track fixing by 6mm rawlplugs and twinfast screws.
Bases are driven on all tracks apart from rear guide.
DIMENSIONS
Guide track 20mm x 10mm
Driving tracks 50mm x 6mm
Tracks to top of base dimension 90mm

BASES
Single folded angle construction 80 x 30 x 2.5mm HR4
Specifications above represent current practice. However, we reserve the right to amend specifications where, in our opinion, a more satisfactory product will result.

FEATURES AND BENEFITS
1. Manufactured in the UK to rigorous Quality standards.
2. Durable steel construction finished in epoxy/polyester powder coatings to RAL or BS colour codes.
3. Quick and easy installation by client if required.
4. Clean finish between

tracks using existing floor coverings.
5. Low profile 'anti-trip' steel tracks - treated for improved durability and appearance.
6. Built in anti-tilt mechanism.
7. Easily dismantled with minimal damage to existing floor.
8. Cost effective price.
9. Low profile base.
10. Gear ratios 2:1, 1:1 (Gearbox not available)
LIMITATIONS
1. Non-levelling tracks
2. 350kgs per bay weight loading (excluding self-weight of shelving).
3. Maximum 5meters in length
4. Minimum depth 350mm
